Leading Market Disruption- Copyright © 2001-2014 by Tony Seba

BENEFITS

Source: Predictions for U.S. market, Morgan Stanley research, 2014

Regulations: Friend or Foe?

- Standardize on signs and signals
- Speed limits - and speeding tickets may disappear
- Some old tech remains useful
- Regulation spurring Innovation?

Uber's First Self-Driving Fleet Arrives in Pittsburgh This Month

The autonomous cars, launching this summer, are custom Volvo XC90s, supervised by humans in the driver's seat.

Expectations

Safer and
happier Cities

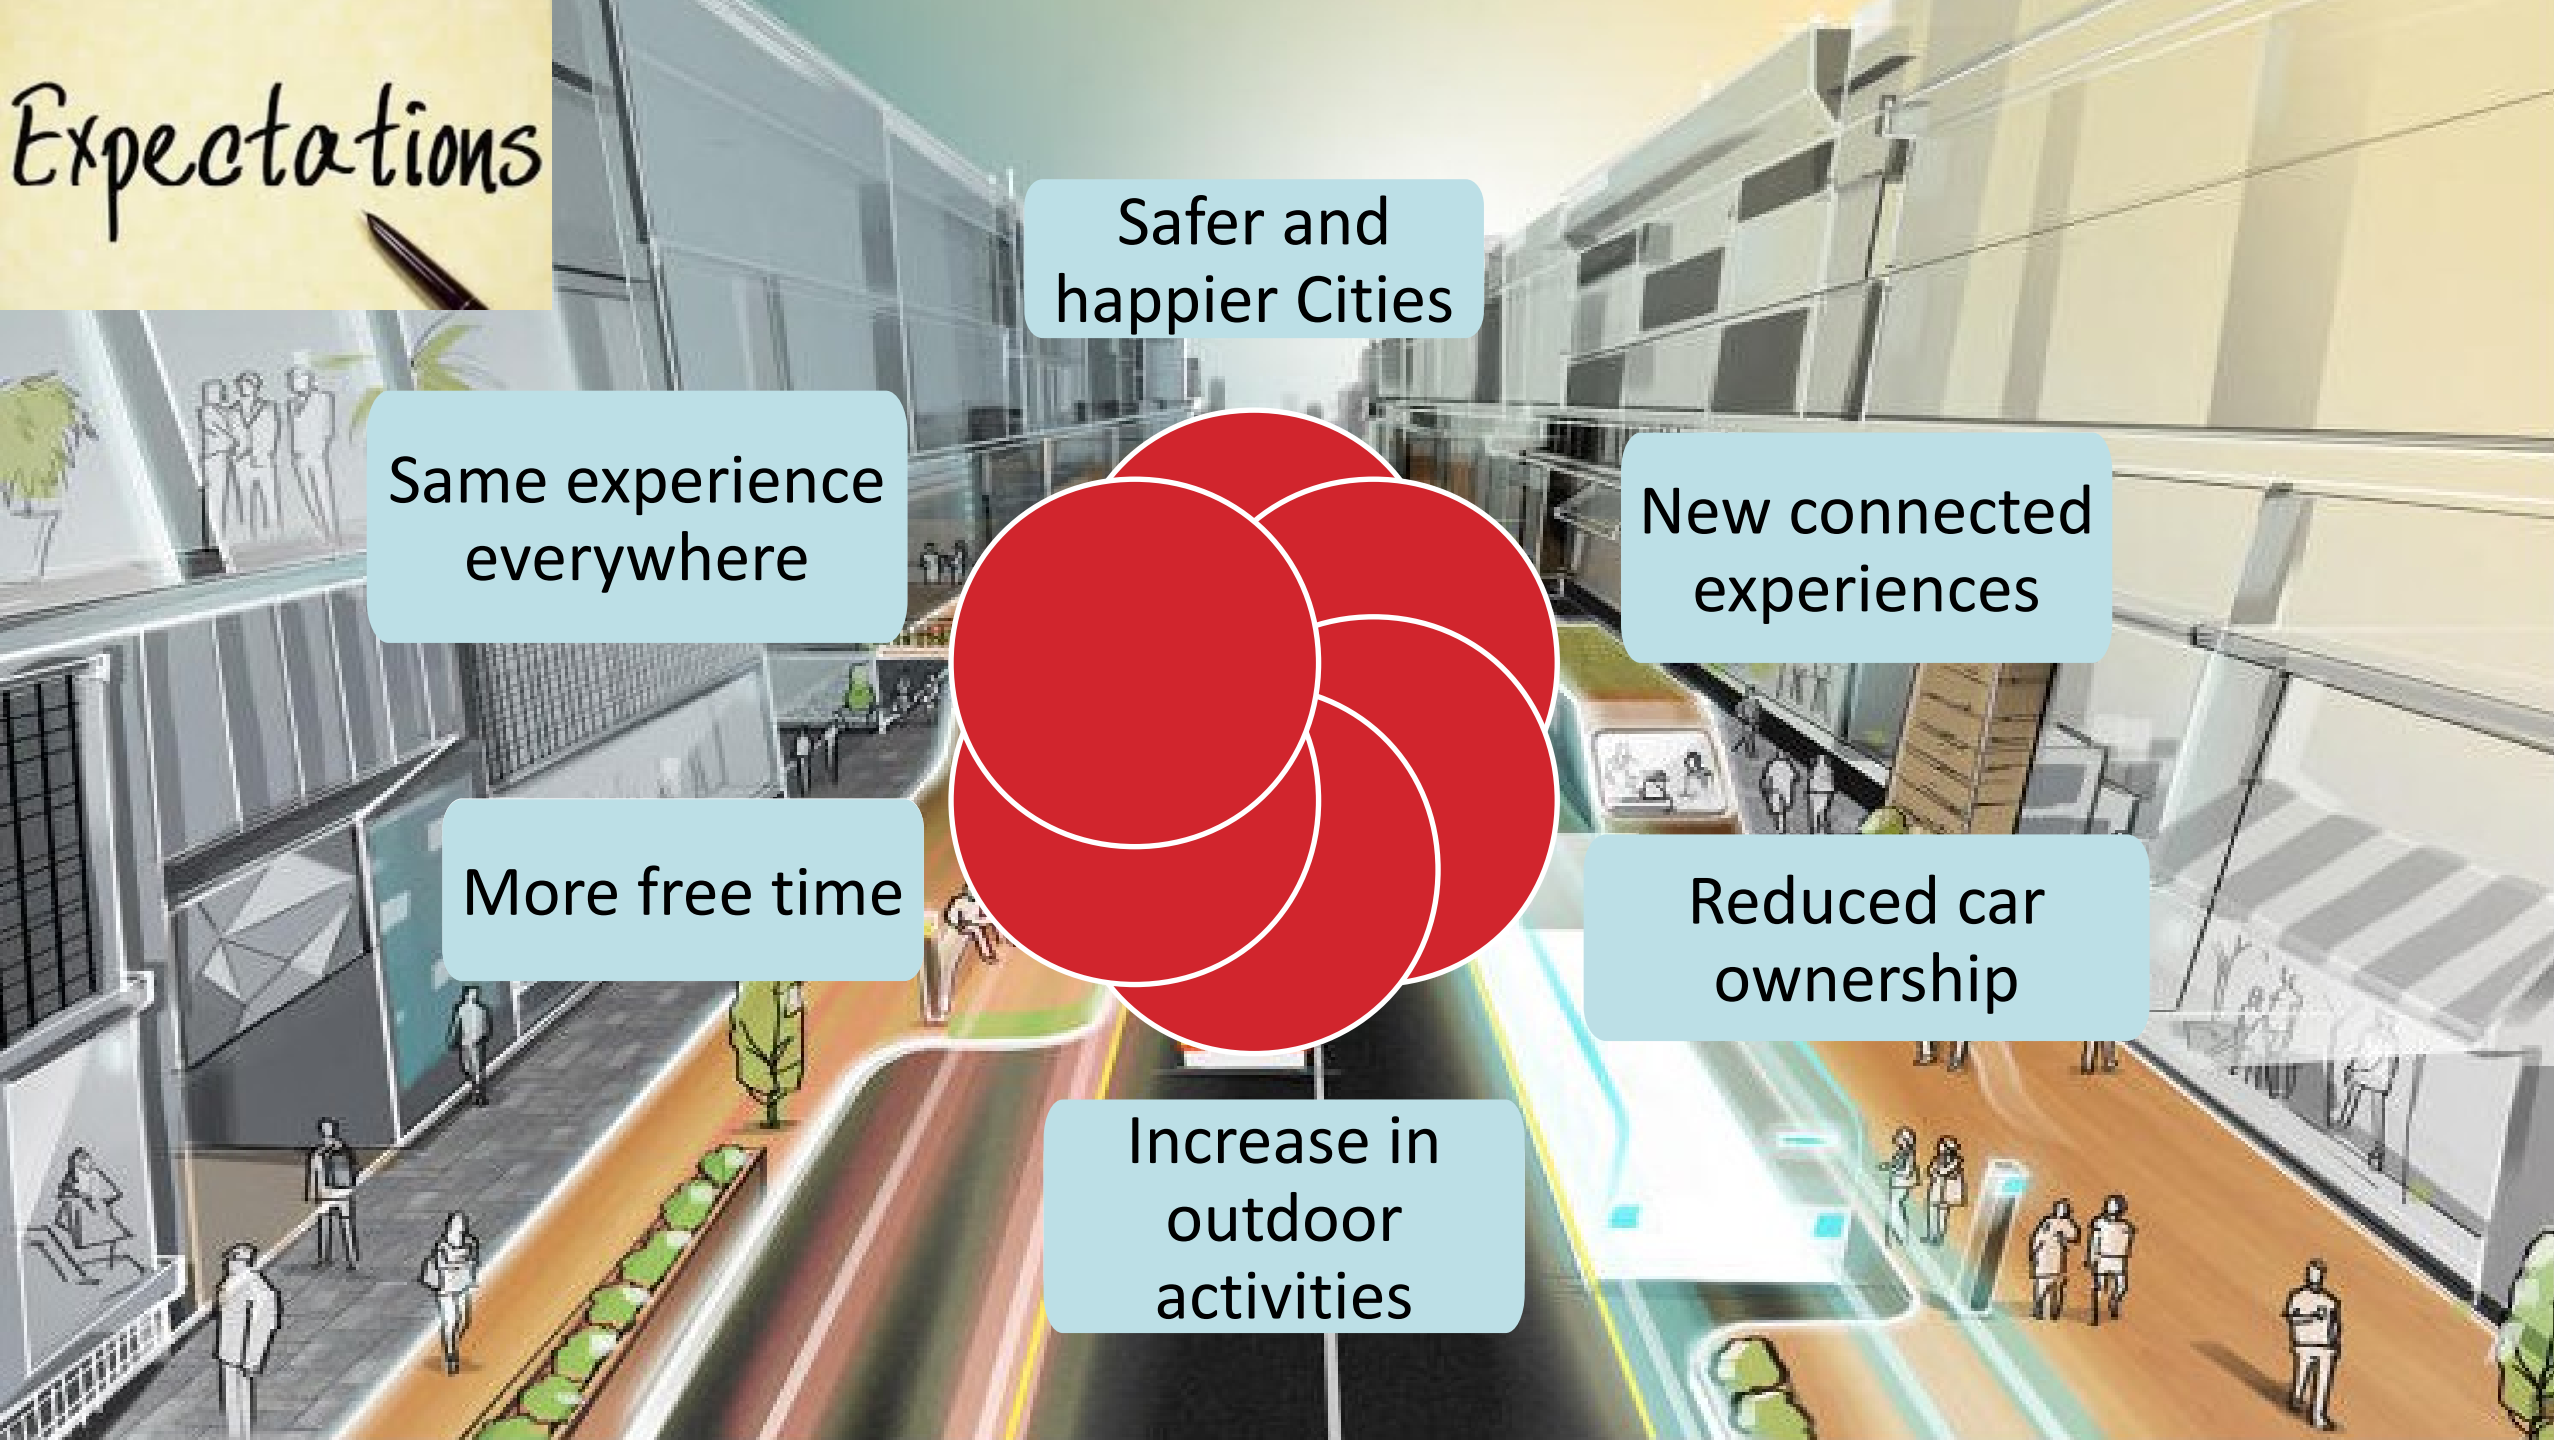

Same experience
everywhere

New connected
experiences

More free time

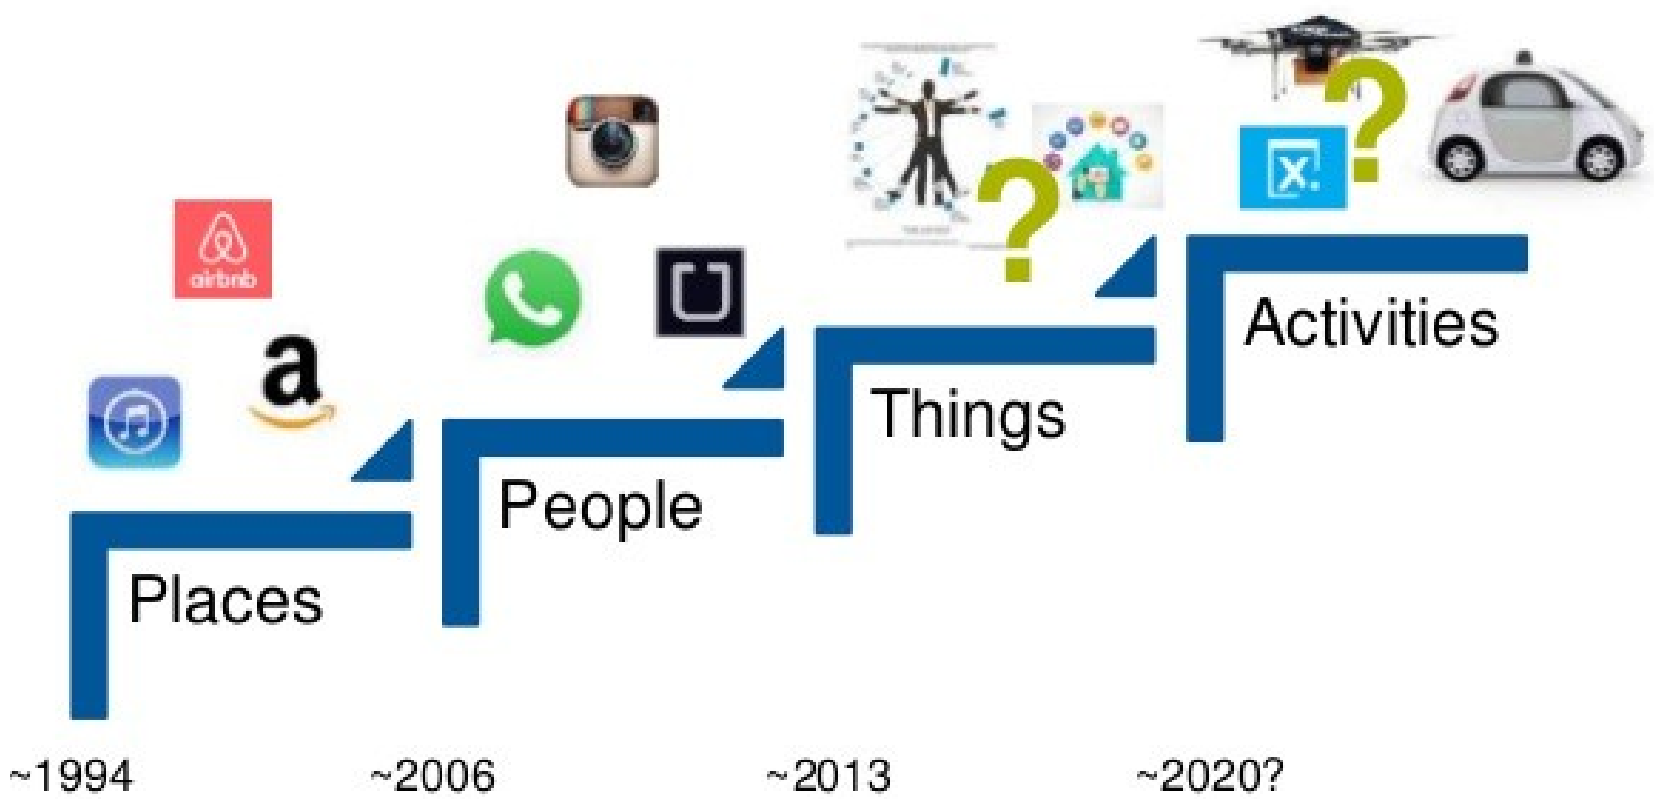

Reduced car
ownership

Increase in
outdoor
activities

Disruption of business models through connectivity

The World is increasingly Activities and Experience driven

SERVICE MENU

New In-Vehicle Experiences	\$/month
Optimize your day with data	\$/month
Take your profile with you	\$/month
New productivity Apps	Freemium
Integrated commuting	\$/month
Fleet management	\$/month
Smart City integration	Gold/Silver packages
Google rides	Free, loyalty programs

MaaS.fi

Mobility as a Service

PRIVATE & SHARED TRAFFIC

DEMAND-BASED TRAFFIC

SCHEDULED TRAFFIC

Essential is to get from A to B

EXAMPLE

“Get anywhere” mobility package for 300 €/month:

- Transportation from A to B according to a service-level agreement (e.g. pickup in 7 minutes)
- Including all transportation (regional public transport, taxi, car and ride sharing, bike sharing etc.)
- Including transport related services (city logistics, home deliveries etc.)
- Roaming in other cities and countries

Tekes

The Winning Recipe

1. Security and Reliability: Getting data into and out of the vehicle securely and timely

SECURITY

- E2E security starts with a HW root-of-trust
- No safety without security
- SW lifecycle management

RELIABILITY

- Predictable round-trip latency, QoS metrics
- Deterministic networking (TSN)
 - 4G → 5G is vital
- Silicon & software footprint in

· RVI for provisioning, authentication, authorization

· System wide Identity

the network will increase

The Winning Recipe

2. Smart Infrastructure: Critical backend systems with guaranteed QoS

CLOUD NATIVE ARCHITECTURE

- On-prem vs public cloud
- How many 9's do you need?
 - Multi Tenancy
- On-demand Usage
- Ubiquitous Access
 - Elasticity
 - Resilience
- Measured Usage

SOFTWARE DEFINED

- Virtualization
- Software defined networking
- Latency, availability and predictability become critical
- Enabling IT like cost-structures

with OT-like QoS

The Winning Recipe

3. Data → Insights → Actions

IN-VEHICLE

- Operational data driving autonomous actions
- Data normalization, computer vision, sensor fusion

BUSINESS LOGIC

- Dashboards
- Trends and Patterns
- Fleet management
- Predictive maintenance
- Billing and payment systems
 - Customer intimacy
- Application Platforms
- “Service Integration Platforms” linking cars with smart cities

Run machine learning models

Tracking and monitoring system

performance

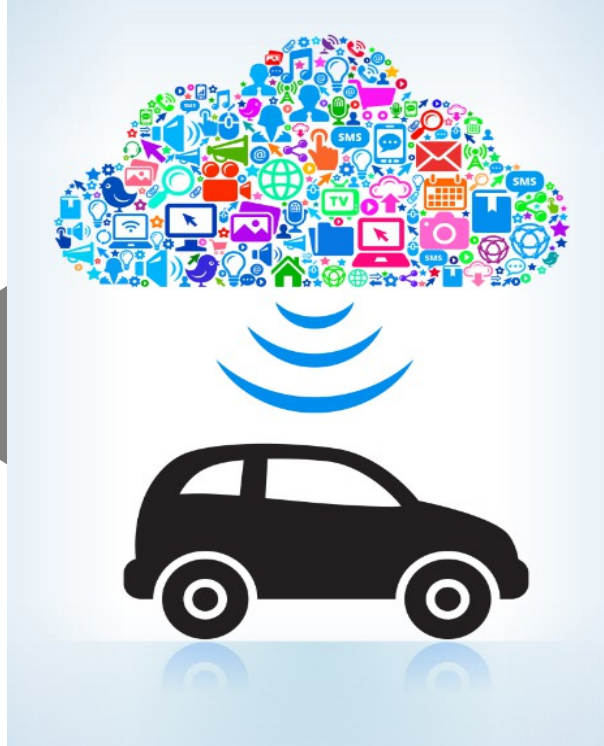

The Winning Recipe

4. Autonomy: Traditional cloud moving closer to the vehicle

FOG

- More in-vehicle compute and storage
- Local analytics and decision making: ML/DL training in the

ORCHESTRATION

- Dynamic and intelligent workload placement
 - Workflow automation
 - System monitoring
- Dynamically adapt to traffic flow

cloud push models to the car
Cloud evolution: gross scale data
analytics cross-domain data

Cities and AV operators will demand highly reliable backend systems to meet SLAs

Software-defined infrastructure will emerge

Requiring us to rethink Connectivity and Networking Architecture

CLOUD & DATA CENTER

Requiring both local and cloud compute and storage

MEMORY

FPGA

Local analytics and decision making become critical

Data becomes the currency of the connected world

Getting data into and out of the vehicle timely and securely

Thank you!
