 jeremiah commented on issue [GENIVI/open-adress-book#2](#)
I changed your access to "maintainer" and I made sure maintainers can make changes to the team repos, of which there is only one, OAD.

Common API C

Project Name	Common API C
Description:	Common API C is a C implementation of Common API. The purpose of the project is to enable programs written in C to work with interfaces defined in Franca IDL .
Source code:	GENIVI Git repository
Issue tracker:	JIRA Stats
Documentation:	

Common API C++

Project Name	Common API C++
Description:	IPC CommonAPI C++ is a C++ based abstraction API for communication stacks, which enables applications to use different communication middleware - so called language bindings - as backend without any changes to the application code.
Source code:	GENIVI Git repository [runtime]
Issue tracker:	Bugzilla
Documentation:	Doxygen code documentation

- Holds nearly all of the GENIVI components including dependencies and subsystems
- Evolving into a complete SDK or ADK
- A good starting point for the latest code
- Supported by multiple hardware vendors

Getting code

```
$ git clone http://git.projects.genivi.org/dlt-daemon.git
```

```
. . .
```

```
$ git commit -asm "Fixed magic code"
```

```
→ Create a patch
```

Contributing to Audio Manager

== Working on the code & contribution

.First get the code from the git:

```
git clone
```

.Get an overview of all branches:

```
git branch
```

.Switch to the branch you want to work on (see versioning scheme, the master is the feature branch) and verify that it has switched (* changed)

```
git checkout <your branch>
```

```
git branch
```

.Best practice is to create a local branch based on the current branch:

```
git branch working_branch
```

Start working, best practice is to commit smaller, compilable peaced during the work that makes it easier to handle later on.

If you want to commit you changes, send them to the audiomanager-dev list, you can create a patch like this:

```
git format-patch working_branch <your branch>
```

This creates a set of patches that are published via the mailing list. The patches will be discussed and then merged & uploaded on the git by the maintainer.

Patches can be accepted either under GENIVI Cla or MPL 2.0 (see section License). Please be sure that the signed-off-by is set correctly. For more, check out <http://gerrit.googlecode.com/svn/documentation/2.0/user-signedoffby.html>

- Important to remember that GENIVI software developers are distributed throughout the world, North America, Europe, Asia
- Requires a distributed communication channel that is asynchronous, that channel is a mailing list quite often
- The mailing list serves as a database of searchable discussion that aggregates by subject matter
- Use the mailing lists!
- It is in the open, so mailing lists are public
- English is not everyone's first language and that is totally fine

Tracking bugs

- GENIVI has a public bug tracker which holds bugs for GENIVI components as well as for the GENIVI Demo platform
- Easy to sign up to the bug tracker and file bugs, add patches, triage bugs
- Sometimes it can be good to discuss the issue on the mailing list first to see if it is a known issue or a local issue

Patches

- Important to have a signed-off-by line on your first commit or patch. This way GENIVI knows the provenance of the code.
- It is often best to discover the best means to contribute to GENIVI first, some companies prefer the Contribution License Agreement, other companies prefer to contribute via the Open Source model. Both are welcome though the open source development model is often a bit easier in some ways since it is better known and quite straightforward.
- More information on patches available on the wiki: <https://at.projects.genivi.org/wiki/display/PROJ/Community+Office#CommunityOffice->

GENIVI has both an operations group and a tools team. Tools team work is done in the open and welcomes input and contribution.

- Public ssh key from the machine you develop on
- Subscription to (at least) genivi-projects
- git (there are numerous GUI git clients)
- GitHub account (nice to have)
- Login to GENIVI public Jira and Wiki (easy to get)
- Continuous Integration service (Go.CD)
- non-html mail client (nice to have)
- FOSSology and Coverity
- Gerrit? Source code mirrors? Other tools that you think are missing?

Managed Applications

"Apps", e.g. Commercial Music Services Weather Social Networks...

E.g. Vehicle Functions Climate (HVAC) Navigation Radio ...

Native Applications

System User Interface

Application Manager

Web App Runtime

Java App Runtime

Prog. framework/abstraction (Qt and others)

Business Logic / Platform Adaptions (optional, dep. on circumstance)

Radio & Tuners

AM/FM	DAB/DRM	Broadcast Data services
SDARS	Terrestrial TV	HD Radio
		TMC/VICS

Telephony

Telephony Stack (eg.0fono)

Navigation/LBS

Traffic Info	Navigation Core	Map Viewer
Map Data Service	Positioning	POI Mgr

Media Framework

Playback Control	Browser
Indexer	Music Identification

Media Sources

USB Mass Storage	Commercial Streaming	Bluetooth Stream
MTP	Internet Radio	AUX
	DLNA	iAP

Internet Functions

DUMM	Web Browser
Cloud Based Services	

Bluetooth

Messaging	Phone Book	Bluetooth Stack (eg.Bluez)
Hands-free	Media Playback	Tethering

Camera Functions

Rear View Camera
Guidance / Overlay

Speech

Speech Input (ASR)	Speech Output (TTS)
Speech Dialog	Speech to Text Dictation

HMI Support

Internationalization	Graphical Framework
Pop-Up Mgr	Buttons
	Handwriting

CE Device Integration

Smart Device Link	CarPlay™
Android Auto	MirrorLink

PIM

Shared Address Book	Internet Account Manager
Device Sync	Calendar
	Internet Account Sync

Vehicle Interface

Seat Heating	Climate Control
Vehicle Settings	Vehicle Interface API (Eg.AMB)

Device Mgmt

Advanced Handover Support
uevent / udev

Audio Mgmt

Audio Manager
Pulse Audio

Audio/Video Processing

EC/NR	Alsa	Video Inputs (i.e. V4L)
Src	Codecs	Gstreamer

Graphics Support

Layer Management	OpenGL (EGL)
IVI Compositor (Wayland Protocol)	

Network Mgmt

ConnMan	Traffic Shaping
Firewall Rule Mgmt	DUMM

Networks

EAVB	SOME-IP	Vehicle Bus Proxy (CAN, FlexRay)
Wifi	Tethering	NFC
		INC
		ICC

IPC

DBus	CommonAPI Runtime
Message Broker/Routers	

Persistence

Persistence Client Lib	Pers. Admin
SQLite, Custom storage	Pers. Health Monitor

SW Management

SW Loading Mgr	Package Mgr
Module Loader	SOTA Client

Lifecycle

Node State Mgr	Node Startup Controller
Node Resource Mgr	Node Health Monitor

User Mgmt

User Identification	
User Switch	User Data Migration

Housekeeping

Error/Event Logging (DLT)	Exception Handling
Statistics	Coding / System Config.

Security Infrastructure

HSM	Encryption, Signatures
LSM	Anomaly Detection

Diagnostics

UDS	Automotive Diagnostics
DTCs	
Remote Diagnostics	

Generic libraries (libc, etc.)

Low-level system libraries (libusb etc.)

Drivers, BSP, Linux Kernel
