

# THE SOFTWARE DEFINED VEHICLE FUTURE

Dan Nicholson

Vice President, Strategic Technology Initiatives

# Introduction

---

The shift to Software Defined Vehicles presents challenges and opportunities to OEM and Supplier alike

Customers expect more capability from their devices, including their vehicles

Collaboration is a key success factor

# Challenges and Opportunities

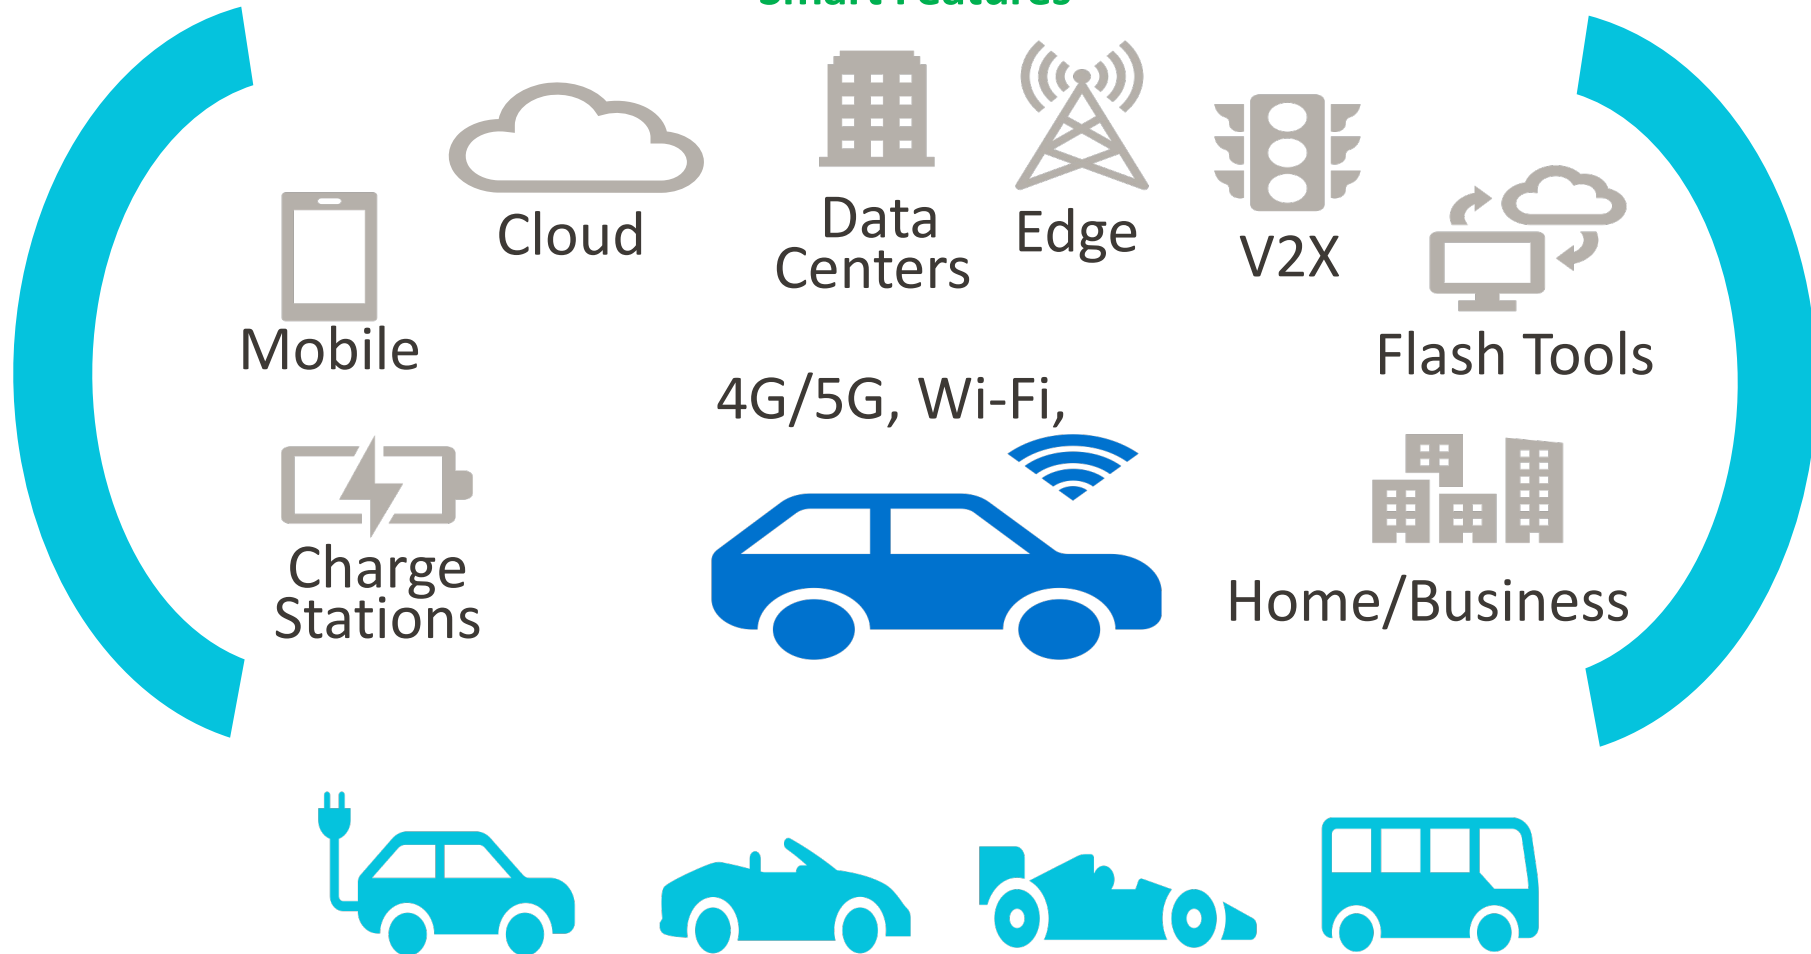

# Connecting Digital Lives

**Challenge: Customers expect seamless connection to their digital lives**

# Connecting Digital Lives

Opportunity: SDV enables Over-the-Air Upgrades, Frequent New Content and Smart Features

# Addressable Lifecycle

**Challenge: Customers expect continual upgrades**

# Apps and Developers

---

**Challenge: Lack of commonality and standardization can lead to fragmented ecosystems**

**Opportunity: Utilize solutions with common APIs to enable:**

- Critical mass for developing for a platform
- Off the shelf choices with common interfaces
- Solutions for areas beyond infotainment

# Optimization of Existing Software Assets

---

**Challenge: OEM and SW Suppliers face pain points in procurement of automotive software**

**Opportunity: A forum to help match buyers and sellers of automotive software assets**

## Our Vision

**zero** crashes

**zero** emissions

**zero** congestion

# Technology-Driven Transformation

Build a Digital Product Portfolio

Build a Platform & Scalable Infrastructure

Protect the Platform and Future Proof it For Innovation

Expand Our Go to Market Thinking

**everybody in.**

# Ultium is the Heartbeat of our All-Electric Future

# Ultifi is Our End-to-End Software Platform

Digital Products will be built using the Ultifi platform and services

Automated Driving

Infotainment

Energy Management

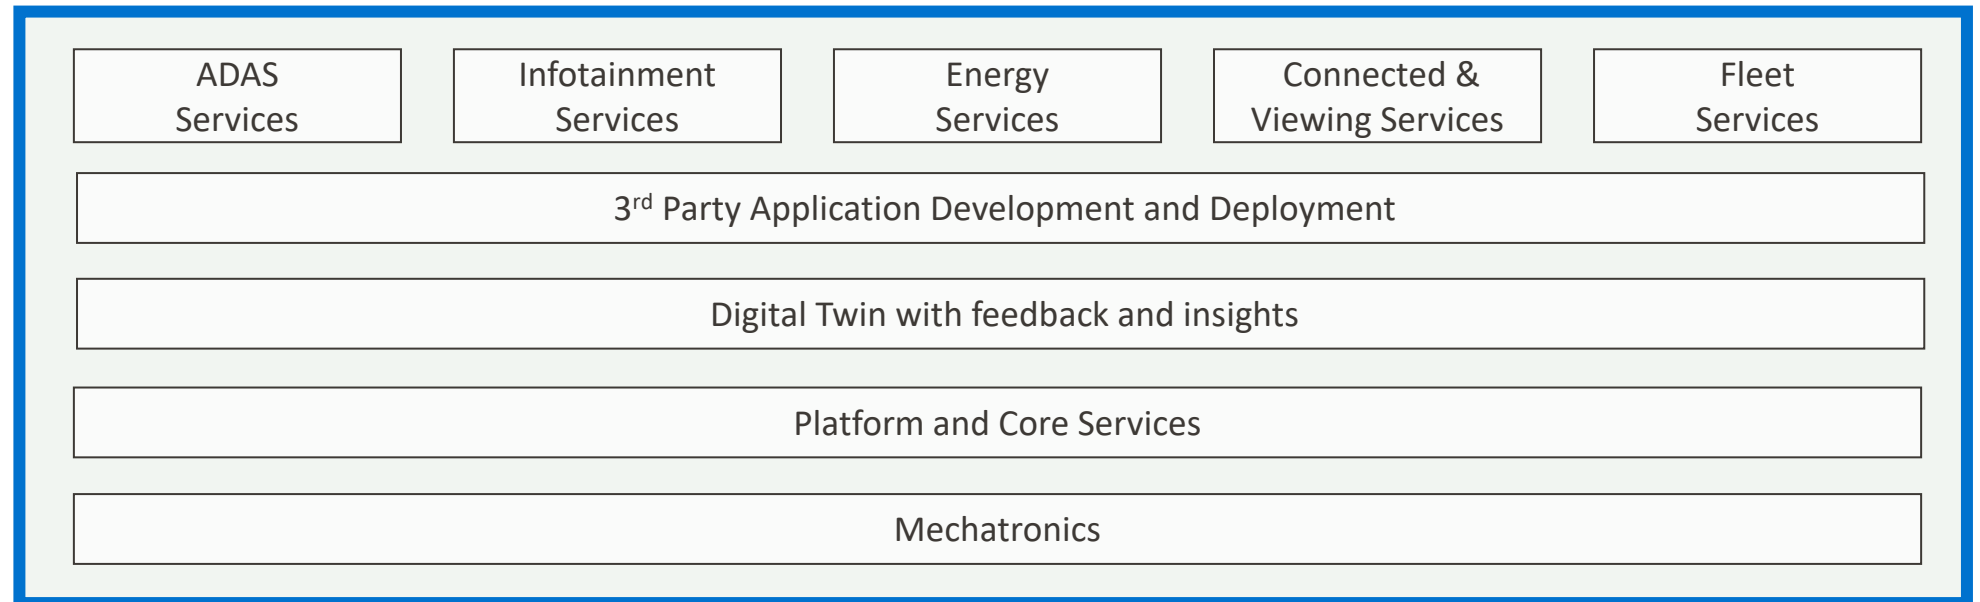

Connected Services

Fleet Management

ultifi

general motors

# Collaboration

---

Customers will benefit from Software Standardization

## Enablers:

- Open Source Software
- Commoditizing the Platform
- Consortia and Liaison Agreements

# uProtocol

---

Connecting Automotive Apps and Services, Everywhere

Promoting collaboration on software solutions

- Contributed as Open Source in Eclipse Foundation

A starting point for standardization

- Builds on existing automotive and internet standards from the mechatronic layer to the cloud

Enabler for more efficient software development across multiple devices

- Allows distributed applications and services to communicate regardless of where they are running

# uServices

Open Source Vehicle Services

We are contributing uServices as open source in COVESA

## uServices Goals

Communicating through  
uProtocol with vehicle  
features

Standard API to abstract  
vehicle services

Enhancing collaboration

Enabling developer access  
for applications

# What Else from GM Today

## Schedule of events with GM participation

**9:00-9:45:** Alternative to Push Notifications Working Session

**9:45-10:30:** AOSP App Framework Standardization Expert Group Status

- **Richard Fernandes:** GM Connectivity Standards Engineer
- Technical Session

**11:30-12:15:** uServices – A Step towards standardized vehicle interfaces for SDV

- **Halim Ragab:** GM Software Architect – Ultifi SDV Platform
- Technical Session

**4:45-5:30:** A Fragment of Your Imagination - Ending AOSP App Framework Fragmentation for Automotive

- **Michael Wahlstrom:** GM Executive Director SDV Product Engineering
- Panel Session

# Key Takeaways

---

Software Defined Vehicles are a seismic shift in what cars can do for customers

We're bolstering industry collaboration by contributing:

- **uProtocol** as open source within Eclipse Foundation's Software Defined Vehicles Group
- **uServices** as open source within COVESA's Data Expert workgroup

Cooperation within organizations like COVESA are a key to success for customers

We intend be a leader in the future of mobility by beautifully designing and engineering Software Defined Vehicles for our customers

Thank You.
