Renesas R-Car Gen 2 support for Genivi 11 update

I blogged back in September of last year about R-Car Gen 2 Beta support for Genivi 11.

That support has been stable for several months. I have therefore merged the existing WIP (work in process) branch stevel/genivi-11-wip into a new product branch genivi-11-bsp-1.10.0. This new branch will be used for any future maintenance and has been set as the new default branch in github [1].

There are no other changes, i.e. no new commit to either branch.
