

New hardware addition to GENIVI Development Platform

A new addition from Renesas is coming into GENIVI's Development Platform (GDP): [genivi-dev-platform/pull/62 repository](#)

It's always exciting to see new hardware be supported by the GDP and this addition is no exception. The platform this time is the [Renesas Gen 3](#) which is a high-end System on a Chip (SoC) designed with autonomous driving in mind. I'm sure we'll see more information on this once the code for this is merged into the GDP but for now if you're eager you can follow along at GitHub as it gets merged.
