

VISSR (WAI) VISS Data Server

Development notes related to the use of the VISSR (WAI) VISS Data Server in the Playground.

Note: In March 2024 the VISS protocol specification and the associated WAI reference implementation were transferred to COVESA from the W3C. At that time WAI was renamed VISSR by the maintainers.

- [Adding additional database backends](#)

Adding additional database backends

Connections to the data store are handled by the VISSR component called Service Manager. Subscriptions are handled internally. To integrate a new database must implement get, set and init methods.

Apache IoTDB example:

1. Pull requests in W3C git rep: <https://github.com/search?q=repo%3Aw3c%2Fautomotive-viss2+iotdb&type=pullrequests>
2. Pull requests in Covesa git rep - <https://github.com/search?q=repo%3ACOVESA%2Fvissr+iotdb&type=pullrequests>
